Art Unit: 1714

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 58-80 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 21-24, 26, 27, 29, 39-42, 52-56 and 60-68 of copending Application No. 10/440,804. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant composition would inherently yield bond strength of at least 3 MPa and the instant two pastes are obvious modification of the composition of said copending Application No. 10/440,804.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 33-39 and 42-57 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. This is New Matter rejection since the recited "at least one acidic compound comprising a homopolymer/copolymer of an α , β -unsaturated carboxylic acid containing---, wherein each of (a), (d), and (g) are in at least a substantially homogeneous phase." in claim 33 does not have support in the originally filed specification. Example 1 recites "homogeneous liquid mixture", but said mixture contains monomer(s), not said polymer.

Also, the recited homopolymer/copolymer only has support for the carboxylic acid containing monomers (see pages 11-12 of the specification).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 33-39 and 42-57 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 33 is indefinite absent a definition for "R". Also, claim 33 recites α , β -unsaturated carboxylic acid containing ---" and various acidic components. However, said (or recited) acidic components are not α , β -unsaturated carboxylic acid except the first moiety (-COOH). Thus, it is confusing with respect to the claimed acidic compound.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Pat. 6,500,004 to Jensen et al teaches two-part dental composition containing bis glycerol dimethacrylate phosphate at col. 7, lines 32-45 and in example 1, but it teaches employing the same constituents of the resin sealing and filling in both parts. Thus, the instant invention utilizing different constituents of the resin in said two-part would not be obvious over said US Pat. 6,500,004.
